

ROVINCE OUTDOOR FASHION & WORKWEAR

2026

FACTSHEET

Dear Rovince customer,

Nothing is as valuable as our health, and we at Rovince know this all too well.

Since 2009, we have been developing and manufacturing clothing with a unique added value: long-lasting protection against mosquito and tick bites!

Over the past 16 years, we have become an authority in the field of insect-repellent clothing, and our garments are worn by a wide variety of professional groups.

But people who encounter ticks whilst out walking or walking their dog also praise our clothing.

As the problem with insects such as mosquitoes and ticks grows year on year, there has been an increasing need for a standard for workwear offering protection against tick bites.

In collaboration with, and under the direction of, NEN and other stakeholders (including the Ministry of Defence, RIVM and Stigas), the 'NEN-8333' standard was published in the spring of 2018.

At the end of January 2025, the European standard NEN-EN 17487 was published. This standard sets out technical requirements, quality tests and conditions of use to ensure both long-term protection against tick bites and the health of the wearer of the clothing.

The insect-repellent Ergoline collection laid the foundations for Rovince 16 years ago. Originally developed for hunting, the collection was later adopted by various government organisations. The Ergoline collection is therefore not only suitable for recreational activities such as hunting, trekking, nature photography or, for example, angling.

The Ergoline collection is also extremely versatile as a clothing range, featuring a modern fit, robust construction and high levels of comfort for everyday wear. The entire Ergoline

Private label

In addition to the Rovince collections available from stock, we also offer a private label range. Rovince has had excellent production facilities for many years in both Europe and the Far East.

Thanks to these various production sites, we are able to undertake private label orders ranging from 50 to 100 items. The range comprises knitted and woven garments in every conceivable colour and size. Delivery times for our private label range vary from 8 to 20 weeks. Whilst our core business is insect-repellent clothing, our private label range also covers all other types of garments.

Thanks to these various production sites, we are able to undertake private label projects in a wide range of sectors. Some of the sectors for which we have carried out private label projects include:

- Construction
- Logistics
- Food
- Automotive

We would be happy to arrange a no-obligation meeting with you to discuss your private label enquiry.

Standards and certification

General

In recent decades, no product has been tested and studied as extensively (scientifically) as permethrin-treated clothing. Several scientific studies have been published, particularly from Germany, which examine both the effectiveness of permethrin and any potential health risks. The most recent publication dates from 2017, in which the German 'Bundesinstitut für Risikobewertung' (Federal Institute for Risk Assessment) considers permethrin (provided it is applied correctly) to be non-'sensitive'.

NEN-17487

The European standard NEN-EN 17487 was published at the end of January 2025. This standard sets out requirements for protective clothing against tick bites that has been treated with the biocide permethrin. Clothing that offers protection against tick bites is classified as personal protective equipment (PPE) and must comply with European Regulation 2016/425.

More about the standard

The standard was originally developed by Dutch experts under the designation NEN 8333. With the publication of NEN-EN 17487, it is now clearly established across Europe how manufacturers can demonstrate that their products comply with the PPE Regulation. The standard provides clarity on the effectiveness and safety of clothing treated with permethrin and also addresses its proper maintenance.

Significance for the sector

The introduction of this European standard highlights the importance of clear guidelines regarding this treated clothing. The new standard provides certainty for manufacturers and gives end-users, such as workers in wooded areas, clarity regarding the quality and safety of the clothing they wear. Furthermore, the evolution of a Dutch standard into a European standard underscores the importance of national standardisation.

Scientific studies and certificates can be requested from Rovince.
